Photorejuvenation

As we age, our skin ages too, showing signs of time, sun damage, and lifestyle choices. These facial imperfections can detract from our appearance, confidence, and well-being.

How Does Lumenis One® Work?

Lumenis One®, an Intense Pulse Light system with patented state-of-the-art technology, delivers a special range of light wavelengths in customizable pulses through a sapphire tip gently on to your skin. The light is absorbed either superficially by broken capillaries and dark pigment or deeper by large vessels and collagen. Dilated capillaries coagulate, pigmented lesions darken and fall away, and then new collagen fibers are laid down, giving the skin a renewed and more youthful appearance.

What Areas Can Be Treated?

Photorejuvenation with the Lumenis One® system can be used to treat any area of the body. The most common areas are the face, neck, chest, and hands.

For more information on photorejuvenation and the Lumenis One® system, visit www.aesthetic.lumenis.com/wt/page/skin_ipl.

How is Photorejuvenation Performed?

A cold gel is applied to the area to be treated, and you will be given dark glasses or goggles to protect your eyes from the bright light. The smooth, cold surface of the Lumenis One® handpiece is gently touched to your skin and pulses of light are applied. You may feel a slight stinging like the snapping of a rubber band. An anesthetic cream may be used, but is seldom required. Each treatment takes about 20 minutes.

Why Are Multiple Treatments Necessary?

Depending on the number of conditions you are treating and the severity of each, a series of four to six treatments may be recommended to achieve excellent long-term results.

You can return to work the same day and resume all your regular activities. By dividing the full program into several treatments, the procedure provides gradual improvement, preserving the convenience of a “no downtime” procedure.

Photorejuvenation with the Lumenis One® system offers dramatic improvement to multiple conditions creating younger, smoother, and healthier looking skin with little or no downtime.
